

# Quintto Party

## Dodgeball

The active candy is moved to any empty square on the board, irrespective of distance or direction.

### Example

### Scoring

Each colour of candy is scored separately. Each player adds up the candies of each colour, and the number of candies of the player that collected the most of each colour defines the value of that colour.

**Example:** Anette collected the most of the red candies, 4 pieces, so the red candies are worth 4 for each player.
